

Oracle JD Edwards LICENSE PLATE INTERBRANCH TRANSFER LP

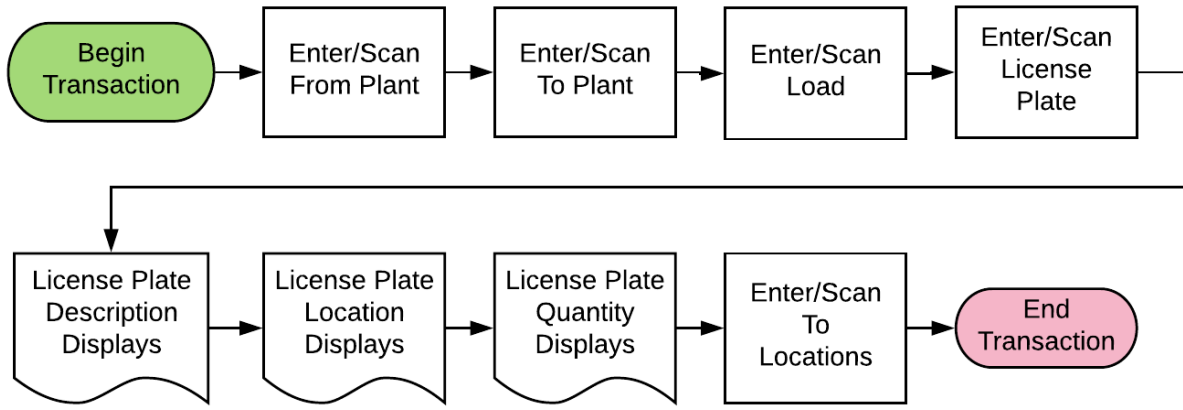

This application transfers the license plate from one branch plant location to another branch plant location.

RFgen Functional Documentation
2019

RFgen provides its customers Oracle-validated, ready-to-use suites of “Open Source” applications and a development environment that can be used to create new apps or to modify existing apps.

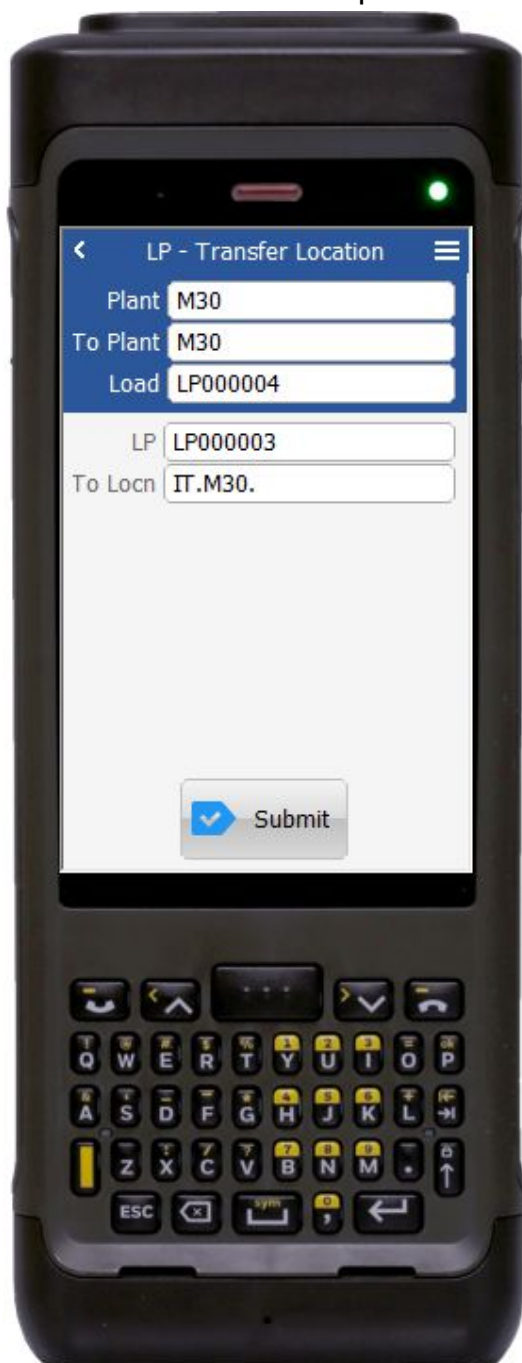

This document describes the business workflow and technical information used in this application.

JD Edwards: License Plate (LP) - InterBranch Transfer LP Workflow

FLPTL0200 LP – InterBranch Transfer LP

This application transfers the license plate from one branch plant location to another branch plant location. The transaction creates a transfer for all items on the pallet attached to the License plate.

Description of Workflow

First the user scans, enters, or searches for a branch plant if one does not default from the user profile.

Second, the user then scans, enters, or searches for the destination branch plant (To Plant).

Third, the Load number field displays "NEW" which creates a new Load number.

The user can overwrite "New" using an existing Load number if desired.

Next, the user scans, enters, or searches the LP ID.

The To Location field displays "IT.Plant." It is set to display only; The user cannot change the To Location.

The user confirms all the entries are correct and taps the **Submit** button to process a transfer of the LP from the current location to the destination location within the same plant/branch plant.

The arrow in the upper left corner, when clicked on, will take the user back to the menu.

Technical Information

The following describes the tables used for validation, search lists, or functions for a given prompt in this application. If applicable, the default property is also included.

Prompt	Validation/Table	Default Property / In-code Defaults
Plant	F41001, F0006, LP002, LP005	RFgen user profile
ToPlant	F41001, F0006, LP002, LP005	NA
Load	F55101	NA
LP	F55101, F55102	NA
To Locn	F41001, F4100, F41021	NA

Note: The transaction creates a transfer for all items on the pallet attached to the License plate, updates the Cardex record and item availability, and updates the LP header record with the new location.

Customization Considerations

If you are planning on creating a new version of this application or modifying it for a customer, consider asking these questions to help prepare your list of customization requirements.

1. Do you have different items on a pallet?
2. Do you use lot control or serialization for your items
3. Do you use mixed lot?
4. Do you prefer to use ITM, LITM or AITM for item number in RFgen forms?
