

Oracle JD Edwards LICENSE PLATE SHIP CONFIRM

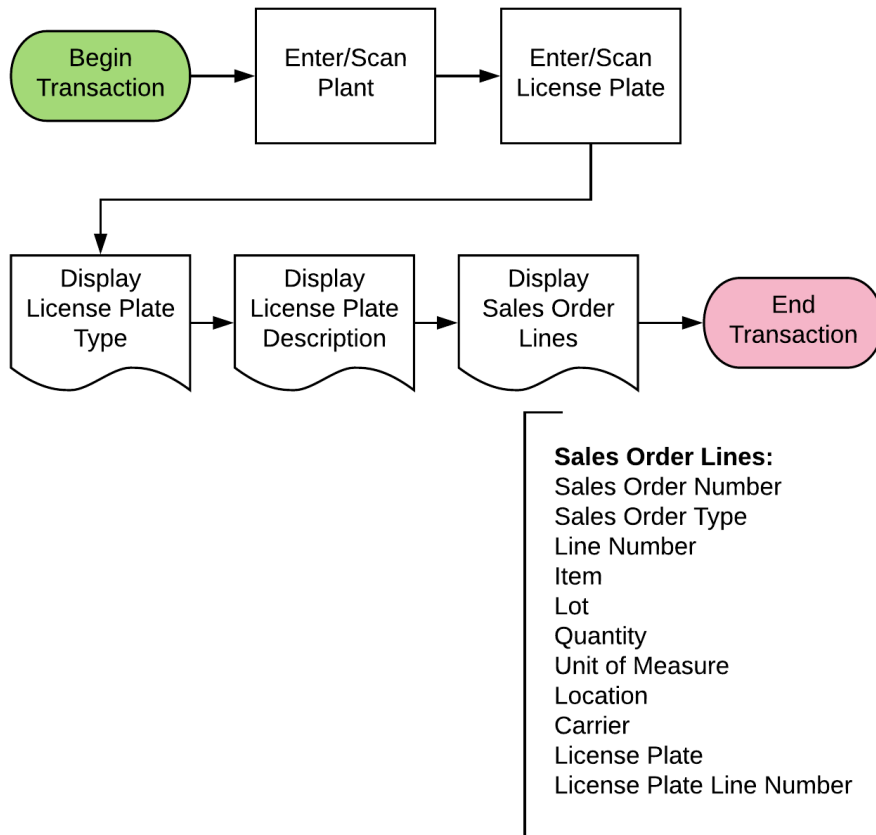

This application helps confirm the shipment of all items attached to a license plate. This transaction requires that LP Pick Confirm has been performed.

RFgen Functional Documentation
2019

RFgen provides its customers Oracle-validated, ready-to-use suites of “Open Source” applications and a development environment that can be used to create new apps or to modify existing apps.

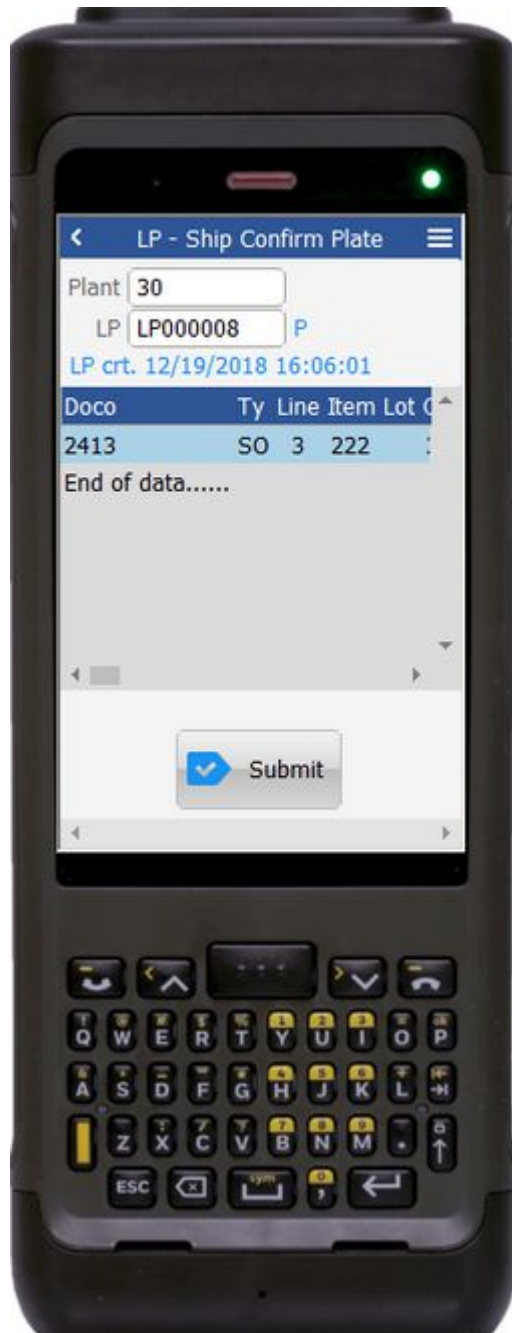

This document describes the business workflow and technical information used in this application.

JD Edwards: License Plate (LP) Ship Confirm Workflow

FLPSC0100 LP – License Plate Ship Confirm

This application transacts a Ship Confirm for an entire License Plate at once and issues inventory from a warehouse. It requires that the LP Pick Confirm was performed.

Description of Workflow

First the user scans, enters, or searches for a plant if one does not default from the user profile.

Second, the user scans, enters, or searches the LP ID.

RFgen validates that the LP ID exists in the LP history table.

The pallet type and description display.

Then a list of all the pallet detail line items displays.

This list includes the following:

Sales Order Number, Sales Order Type, Line Number, Item, Lot, Quantity, Unit of Measure, Location, Carrier, License Plate, and License Plate Line Number

The user taps **Submit** to process the Ship Confirm transaction.

The arrow in the upper left corner, when clicked on, will take the user back to the menu.

Technical Information

The following describes the tables used for validation, search lists, or functions for a given prompt in this application. If applicable, the default property is also included.

Prompt	Validation / Search – Tables / Functions	Default Property / in-code defaults
Plant	F41001, F0006, LP002, LP005	RFgen user profile
LP	F55101, F55102	NA
LP List	F55101, F55102, F55102H	NA

Customization Considerations

If you are planning on creating a new version of this application or modifying it for a customer, consider asking these questions to help prepare your list of customization requirements.

1. Do you have different items on a pallet?
2. What are the conversion factors for the items on a pallet?
3. Do you use lot control or serialization for your items?
Note that RFgen does not support the JDE "optional Lot".
4. What is the format of the lot number or serial number?
5. Do you use mixed lot? One item can belong to many different lots (different production dates) and be stored together in one location.
6. Do you prefer to use ITM, LITM or AITM for item number in RFgen forms?
7. If yes, what level of authorization is required regarding lot-controlled items?
8. Do you allow transfer of items whose lots are on "On Hold" status?
9. If yes, do you use lot group status (alias: LOTGRP) or are there any scenarios or lot statuses that transfer is allowed?
10. Do you allow transfer of items to a different but existing item branch plant?
11. Do you allow transfer of items to a different branch plant where the item does not exist?
12. Is there any specific locations within the same branch plant whereby transfer is not allowed?
13. Are there any staging locations for inbound, outbound or warehouse?

14. Do you allow negative quantity available and negative quantity on hand?
15. Do you use a default BP, print queue/printer for user?
16. If using barcodes, in what format are the barcode to be scanned? 1D, 2D or 3D?
17. Do the labels need to be printed? What fields and format are needed?
18. Do labels need to be reprinted?
