Description of Workflow

First the user scans, enters, or searches a Manufacturing Order (MO).

If the MO has a revision, it will display. The MO build-part will display.

The user scans, enters, or searches a Line number for the MO. The part on the line, the part revision, issue quantity, and project abbreviation display.

The user scans, enters, or searches a source location. The on-hand quantity displays.

If the part is lot-controlled, the user scans, enters, or searches a lot number. The on-hand quantity is recalculated including the lot value and display.

The user enters the quantity of the part they wish to issue to the MO.

If the part is serial-controlled, the user scans, enters, or searches a serial number. A counter to the right of the Serial field will accumulate how many serials are entered. The focus will stay in the Serial field until the same number of entries match the quantity to issue.

If the user clicks the **Next Part** button, the entered values will be stored and accumulated

with other parts until the **Submit** button is tapped.

The application will then reset back to the Line field.

If the user taps the **Submit** button, the application posts all the parts to Costpoint and restarts the application.

The arrow in the upper left corner will take the user back to the menu.

Technical Information

The following describes the tables used for validation, search lists, or functions for a given prompt in this application. If applicable, the default property is also included.

Prompt	Validation / Search – Tables / Web Method	Default Property
		User Property "WarehouseId"
Order	MO_HDR	
Line	MO_RQMT / PART / ITEM	
Locn	WHSE_LOC / INVT_WHSE_LOC	
Lot	INVT_WHS_LOC_SR_LT	
Qty		
Serial	INVT_WHS_LOC_SR_LT	
App Update	PCMMOISS web service
