Oracle JD Edwards
SALES ORDER – SPEED STATUS UPDATE

This application updates the status codes on Sales Order lines.

RFgen Functional Documentation

2019

RFgen provides its customers Oracle-validated, ready-to-use suites of Open Source applications and a development environment that can be used to create new apps or to modify existing apps.
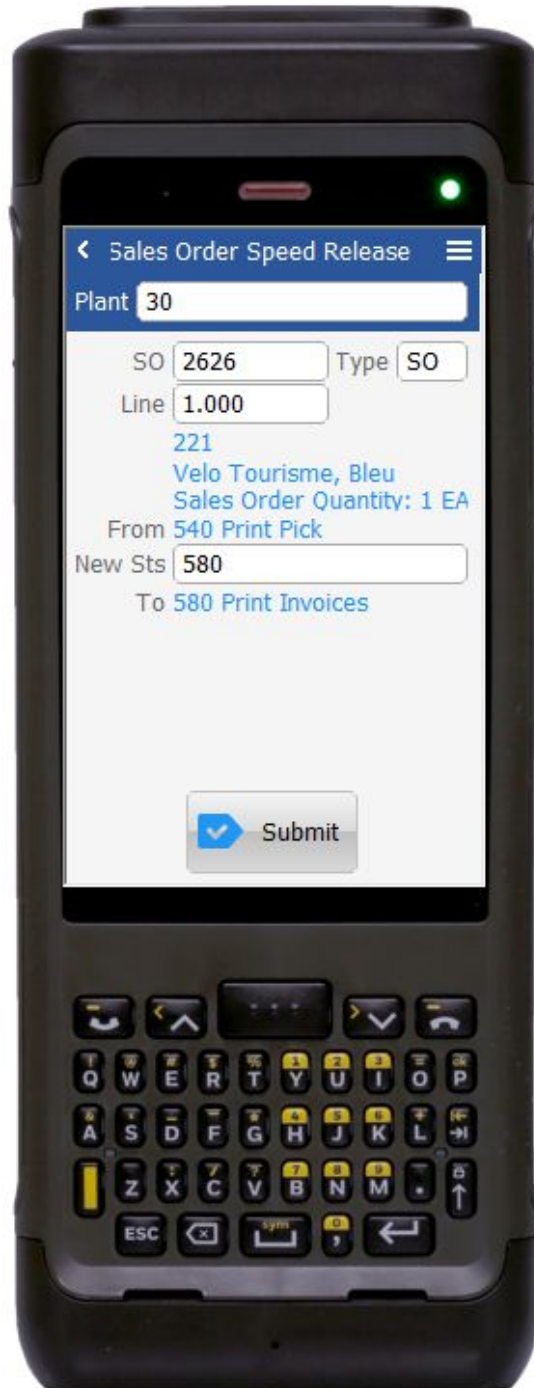

This document describes the business workflow and technical information used in this application.

JD Edwards: Sales Order (SO) - Speed Status Update Workflow

```
Begin          →    Enter/Scan    →    Enter/Scan    →    Order Type    →    Enter/Search
Transaction          Plant             Sales Order        Displays            SO Line Number
                                       Number
```

```
Output         →    Enter/Search  →    SO Status     →    End
                     Status             Displays            Transaction
```

FSOSU0100 SO – Speed Status Update

This application updates the status codes on Sales Order lines.

Description of Workflow

First the user scans, enters, or searches for a plant if one does not default from the user profile.

Next, the user scans, enters, or searches for the sales order number in the SO field.

The order type is retrieved and the default displays in the Type field.

Next the user will enters or searches and selects the line number.

The item number, item description, sales order quantity, primary UOM, and the current sales order status display below the line number.

The user now enters or searches and selects a new status for this sales order line.

The new status displays in the To field, and the Submit button appears.

The **Submit** button sends this transaction to JDE and then the form will reset.

The arrow in the upper left corner of page 1 takes the user back to the menu.

Technical Information

The following describes the tables used for validation, search lists, or functions for a given prompt in this application. If applicable, the default property is also included.

Prompt	Table	Description
Plant	F41001	App.UserProperty("Plant")
SO	F4201/F4211	
Type	F4211	
Line	F4211	

Customization Considerations

If you are planning on creating a new version of this application or modifying it for a customer, consider asking these questions to help prepare your list of customization requirements.

1. Which JDE version is being used for the speed status update?
2. Have you set up an order activity status for non-inventory line items?
3. Have you set up a non-inventory line item line type?
