

Global packaging manufacturer thinks outside-the-box and makes productivity soar with mobile barcoding.

Graphic Packaging International

SUCCESS STORY

Challenge

Previously relying on a legacy shop floor system and aging character-based data entry tool, Graphic Packaging International (GPI) knew they needed to upgrade their workflows with enhanced mobility and automation in order to keep up with increasing product demand and mitigate current operational deficiencies. And with a future expansion and potential migration to SAP S/4HANA on the horizon, this need became even more apparent—and urgent.

The task force assigned to investigate possible solutions quickly determined that they would need to implement something that was already SAP-certified for a more seamless integration with their ERP and with minimized downtime during the transition. This led them to RFgen.

RFgen Mobile Foundations for SAP integrates with any SAP deployment, cloud or on premise, and supports single-tier, two-tier and multi-tier ERP landscapes. With zero footprint on the SAP environment, RFgen Mobile Foundations for SAP collects and communicates data from almost any device, all while transacting against existing business rules using the SAP database—a big advantage for GPI. This additional functionality unlocks a 25% increase in efficiency and 30% increase in productivity for powerful gains in critical supply chain processes.

RFgen Solutions

Manufacturing

Since GPI planned to upgrade their international manufacturing facilities, they also needed a solution that could work seamlessly with multiple languages, including English, French Canadian, French, British English, Catalan, Spanish, Dutch, German and Canadian English.

Solution

Recognizing its numerous benefits, GPI quickly chose to implement RFgen's Mobile Foundations for SAP on a roll-out basis, beginning with its North American manufacturing facilities. After RFgen's SAP consultants completed the initial training, GPI was able to send their own team of RFgen-experts to train the next GPI manufacturing facilities. Each facility averaged 150 users and RFgen was able to reduce training time by 80%.

Results

Today, GPI has successfully upgraded their facilities with RFgen at 25 of their North American sites, with plans to expand into their international production sites. User acceptance of the new program has also been extremely high.

Key results include:

- ▶ Automated and mobilized data collection successfully at 25 North American sites and counting
- ▶ Trained local teams in end-user education to be administered in house
- ▶ Deployed scalable solution for international deployment
