# Oracle JD Edwards LICENSE PLATE INTERBRANCH RECEIVE

This application transfers the license plate from one branch plant location to another branch plant location.

---

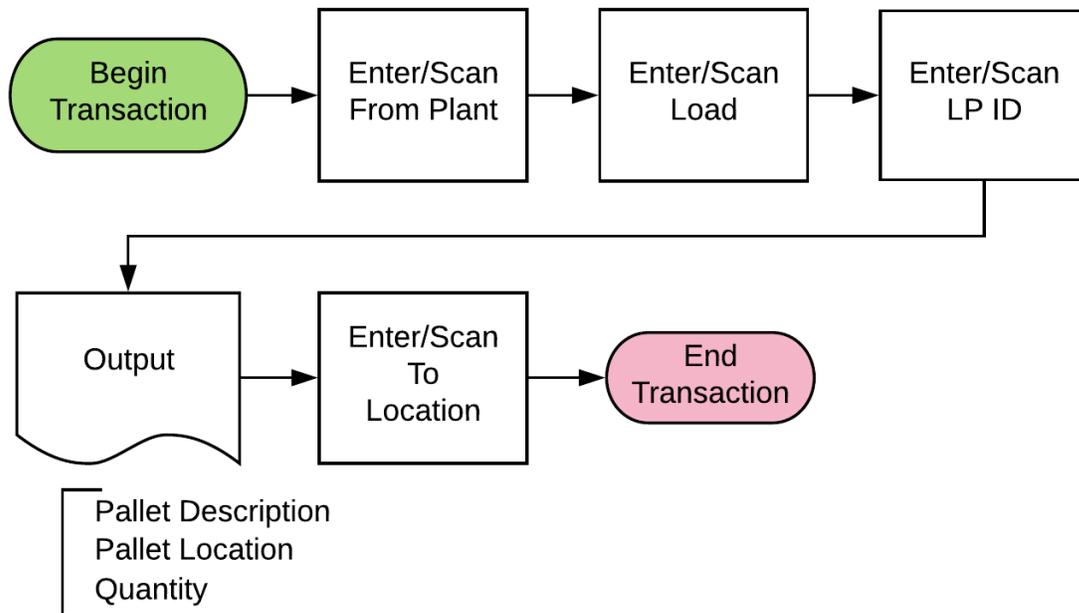

RFgen Functional Documentation  
2019

RFgen provides its customers Oracle-validated, ready-to-use suites of "Open Source" applications and a development environment that can be used to create new apps or to modify existing apps.

This document describes the business workflow and technical information used in this application.

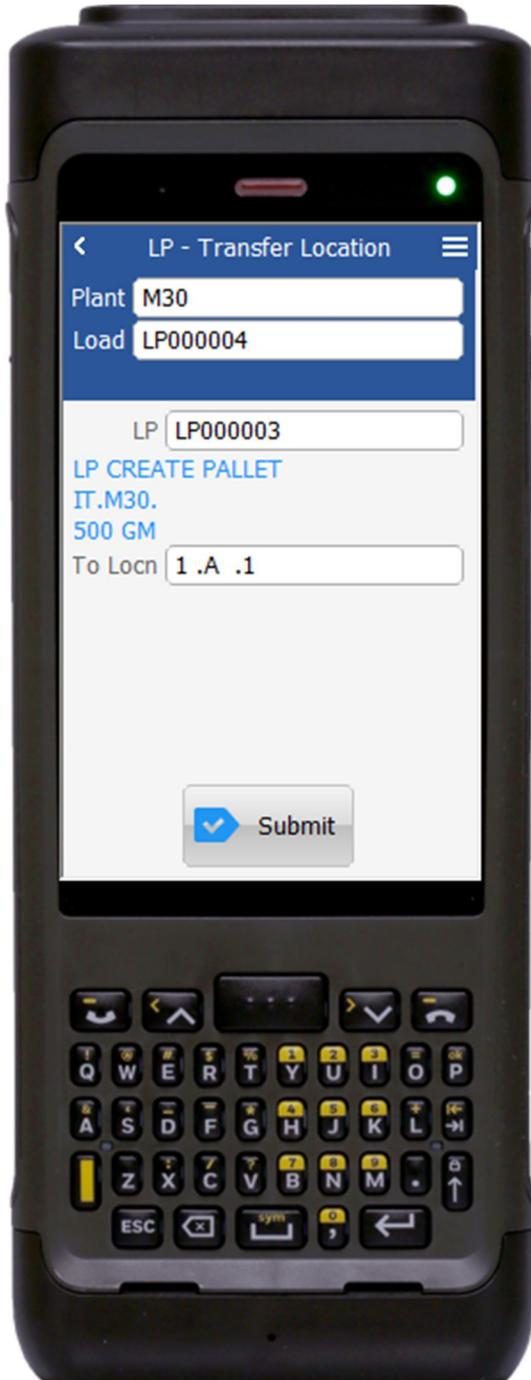

## JD Edwards: License Plate (LP) - InterBranch Receive Workflow

## FLPTL0200 LP – InterBranch Transfer LP

This application transfers the license plate from one branch plant location to another branch plant location. The transaction creates a transfer for all items on the pallet attached to the License plate.

### Description of Workflow

First the user scans, enters, or searches for a plant if one does not default from the user profile.

Second, the user then scans, enters, or searches the Load number which relates to the pallet.

Next, the user scans, enters, or searches the LP ID.

The pallet description, pallet location, and quantity display.

The user confirms all the entries are correct and taps the **Submit** button to receive (load) a transfer of the LP from its current location to the destination (receiving) location within the same plant/branch plant.

The arrow in the upper left corner, when clicked on, will take the user back to the menu.

## Technical Information

The following describes the tables used for validation, search lists, or functions for a given prompt in this application. If applicable, the default property is also included.

Prompt	Validation/Table	Default Property / In-code Defaults
Plant	F41001, F0006, LP002, LP005	RFgen user profile
Load	F55101	NA
LP	F55101, F55102	NA
To Locn	F41001, F4100, F41021	NA

## Customization Considerations

If you are planning on creating a new version of this application or modifying it for a customer, consider asking these questions to help prepare your list of customization requirements.

1. Do you have different items on a pallet?
2. Do you use lot control or serialization for your items
3. Do you use mixed lot?
4. Do you prefer to use ITM, LITM or AITM for item number in RFgen forms?
