

SAP PLANT MAINTENANCE – NOTIFICATION INQUIRY

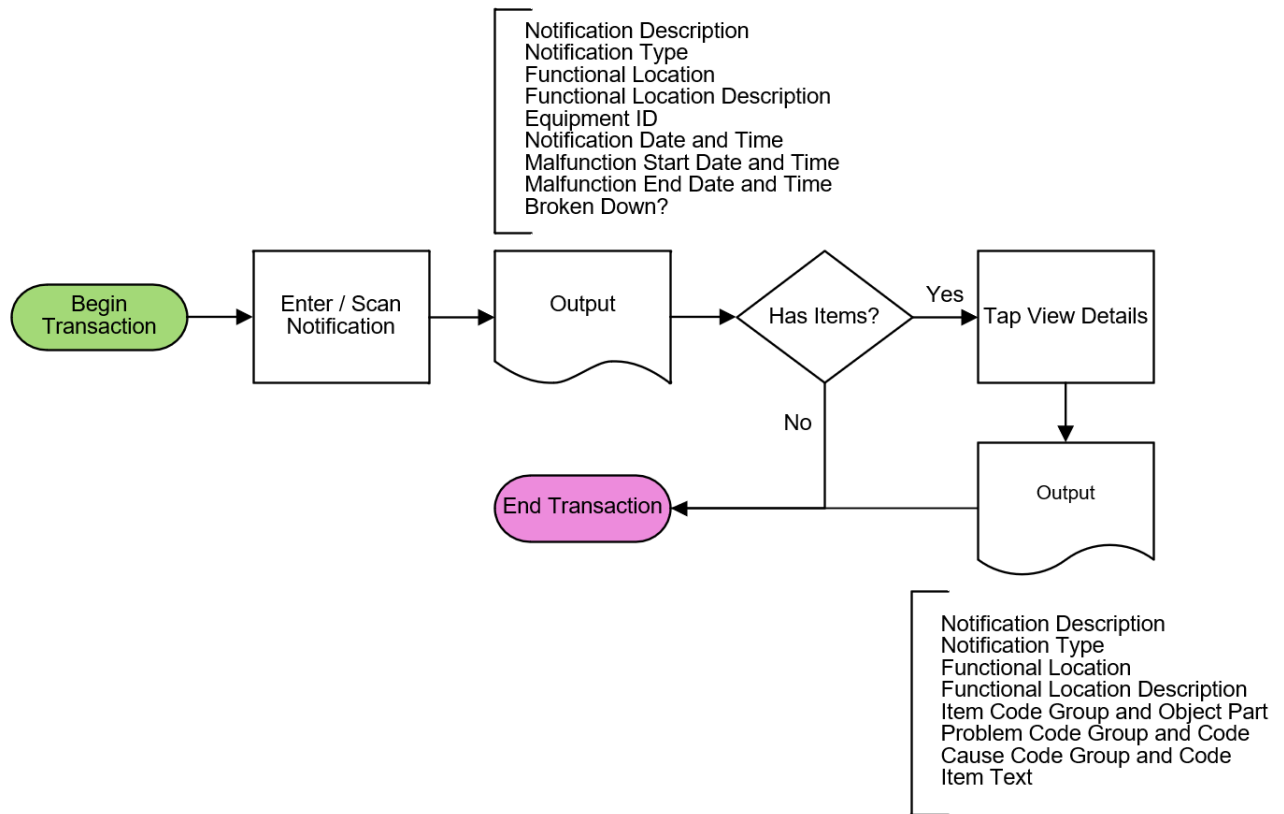

This application is used to view a notification and if applicable, the notification item details.

RFgen Functional Documentation
2022

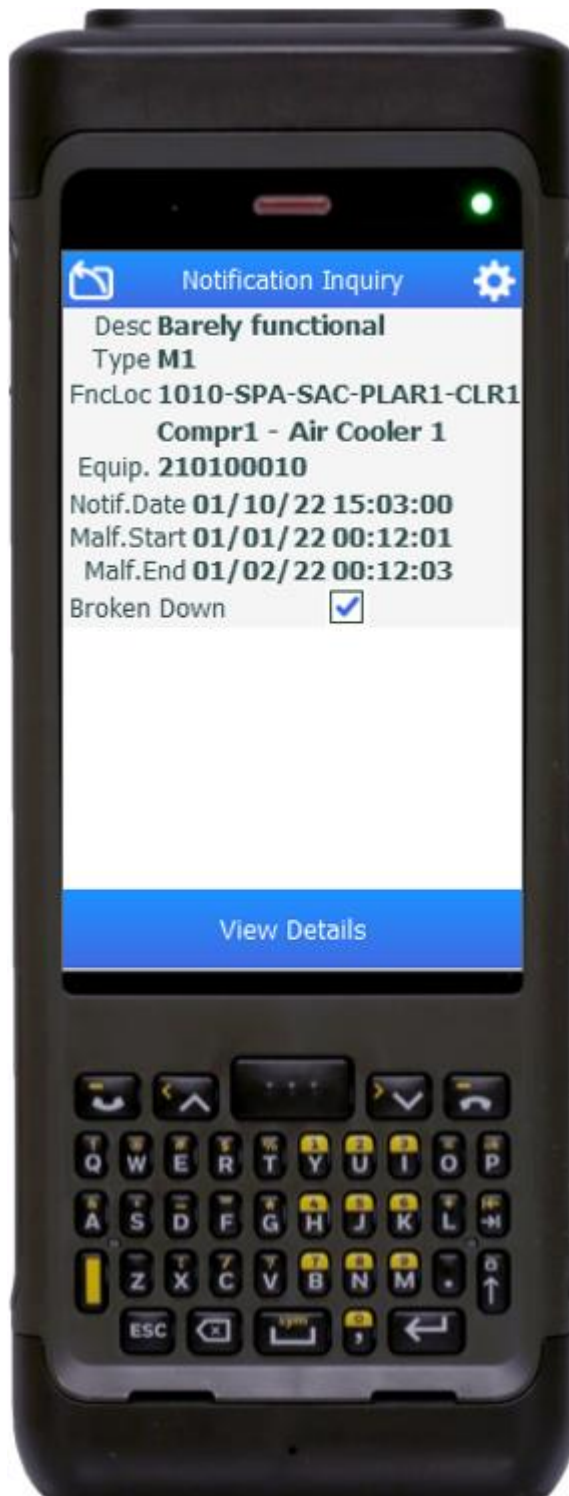

RFgen provides its customers SAP-validated, ready-to-use suites of applications and a development environment that can be used to create new apps or to modify existing apps.

This document describes the business workflow and technical information used in this application.

SAP: PM – Notification Inquiry Workflow

FPMQN0200 PM –Notification Inquiry

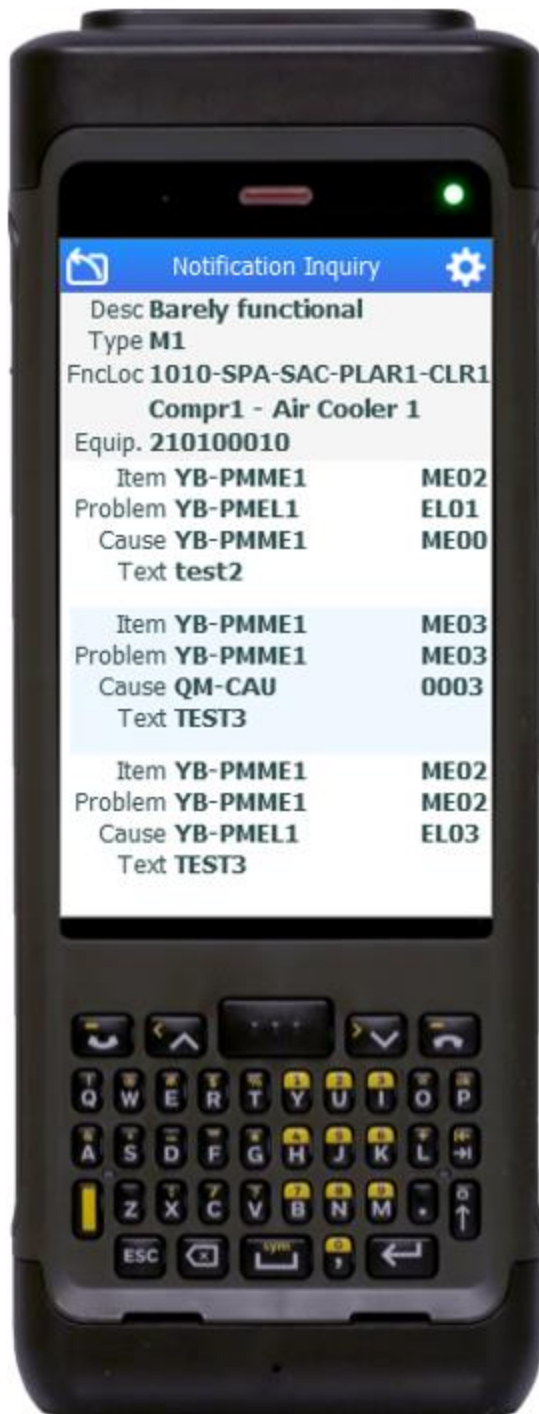

This application is used to view a notification and if applicable, the item details of a notification.

Description of Workflow

First, the user scans, enters, or searches for a notification.

The following displays: Notification description, notification type, function location, function location description, equipment, notification date, malfunction start date and time, malfunction end date and time, and whether its broken down.

If there are items for this notification, the **View Details** button will display at the bottom of the application.

If the user taps **View Details**, the notification items display.

The item details lists: Item Code Group and Object Part, Problem Code Group and Code, Cause Code Group and Code, and Item Text.

The arrow in the upper left corner moves the cursor back to the previous prompt until the user reaches the menu.
