The Need for Speed:
Transforming Your Mobile Inventory in Record Time for SAP

START YOUR ENGINES

If you run on SAP to manufacture or distribute products, inventory is at the heart of everything you do. Companies like yours must be agile, resilient, and productive to stay in the competitive race. That's why **speed and efficiency are crucial** at every level of operations—without sacrificing accuracy or quality.

WHY YOU NEED SPEED

Speed to Deployment

You can't afford to wait years to digitize your SAP inventory. New plants, new products, new customers, and new regulations drive the need for progress. But implementing a new inventory or warehouse management solution can be a lengthy process, often a year or more. Building your own from the ground up can take even longer. Meanwhile, you're losing money and productivity. Outdated inventory data alone can cost an extra **$2,000 per day in overhead**—or more. You need speed!

How fast your new solution can deploy directly impacts how soon you can transform your operations. **RFgen mobile barcoding deploys in a fraction of the time** vs. other solutions, equipping you with critical real-time inventory control, visibility, and automation for SAP in record time. Flexible mobile apps and expert integration can bring your barcode solution from Blueprint to Go-Live in just 90 days.

Speed of Data Collection

Once you have your mobile solution, automation should streamline inventory so your business can operate at maximum speed. All too often, a slow or poorly designed mobile app gets in the way. Even small delays add up, especially in a fast-moving warehouse.

Web-based mobile apps can take up to 10 seconds per transaction. **You're wasting weeks (even months!)** of time every year just waiting for data to process. That's a cost you can't afford.

Compare that to highly efficient mobile apps built for rapid data processing with SAP. RFgen barcode scanning takes just *milliseconds* per transaction— **more than 100 times faster!** Rapid speed is a must for instant, real-time inventory management, enabling you to get the right product to the right place at the right time.

Speed of App Development

Your mobile inventory solution is off to the races. Then business priorities shift, or your mobile apps need fine-tuning to fit company standards, and you need to change something. How much will that cost and how long will it take?

Developing your own mobile apps is deceptive. What starts as a straightforward project quickly balloons with delays and expense. To make an effective mobile app requires two different skillsets: an experienced programmer and a supply chain professional. **Those skills rarely exist in the same team member**.
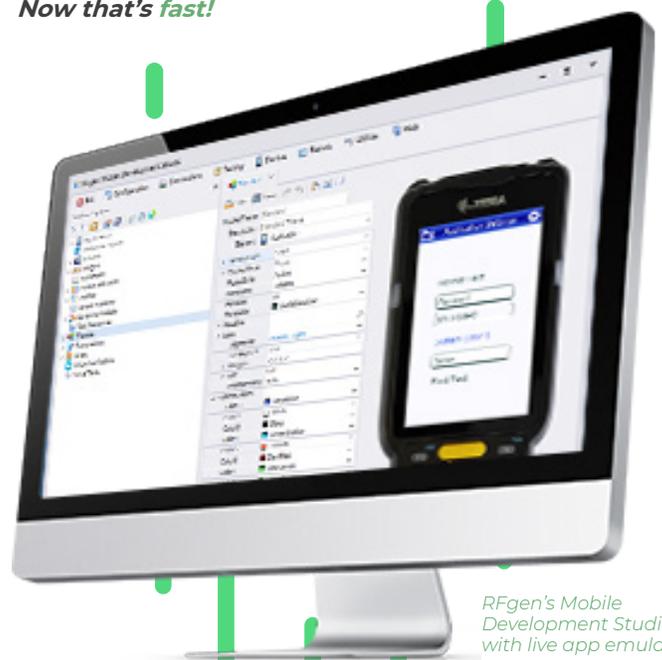

These inevitable hurdles highlight the necessity of a fast mobile app development environment that your in-house team can easily use to keep your mobile SAP tasks operating at maximum velocity. RFgen solves this problem by combining **decades of deep experience and expertise** in both SAP mobile apps and supply chain best practices.

RFgen's SAP mobile solution delivers extra layers of speed by combining all the tools you need into one solution. Mobile apps for most SAP supply chain transactions have already been created and tested, ready to be tailored to your exact needs in no time at all.

RFgen's low-code development environment also enables you to quickly modify or create mobile apps with a low skillset using pre-built templates and reusable functions, **slashing your development time by 70-95%**. You can also see exactly what mobile apps will look like on the device of your choice in real time.

Instead of sinking four months into one mobile app, **RFgen eliminates the guesswork** so you can do it in two days or less.

Now that's *fast!*

RFgen's Mobile Development Studio with live app emulator

DON'T SETTLE FOR SLUGGISH.
CROSS THE FINISH LINE—*FAST!*

Stop wasting time with compromise. You can experience greater speed at lower cost with less effort sooner than you think. For more than three decades, RFgen's highly experienced consultants have guided our exceptional customers with their deep understanding of industry-specific challenges in the SAP-driven supply chain. Your enterprise could be next.
